

OPAS Release Notes

Release 10.5 – installed September 6, 2012

Release 11 – installed September 26, 2012

Solution	What Changed	Any Known Issues
Leave Counters	The calculation has been corrected to look at: CarryOver (which is capped at the maximum allowed carry over) + AmountToBeAccrued (based on leave category * # of payperiods) - Amount Used - Amount Planned - Amount Requested.	N/A
Error When Moving Shift	A handful of unexpected results when moving shifts were corrected. Moving shifts will now be done correctly.	N/A
Shift Swaps Becoming Undone with Subsequent Swaps Involving Overlapping Employee	A test script was created to locate any shifts that were affected by this issue. All affected shifts were fixed.	N/A
Missing Employee from Day of Operations Form	Shifts ending at midnight were not correctly displayed in the DoO form. This has been resolved.	N/A
Consecutive Days Precondition Preventing Shift Swap Requests	Shift swap requests are no longer incorrectly prevented. The precondition that disallowed the swap has been corrected.	N/A
Invalid Consecutive Working Days Constraint Violation	The calculation that determines the number of consecutive working days has been corrected.	N/A
Split Shifts Not Being Sent Correctly to CRU	The second half of the split has been updated to send the correct duration. This was test on Dev with the CRU team, who confirmed the change and the shift coming through correctly.	N/A
Logon Report – Incorrect Column Displaying	The "Last Log In" column will now show date of the employee's most recent log in. The panel displaying dates is now sorted with the most recent date at the top.	N/A
Clicking "Go To Day" Does Not Update Schedule Plan	We had seen an issue at DCA where clicking "go to today" and then dragging a shift from the shift definition panel to an employee's empty day caused that employee to be assigned incorrectly (they would disappear from the DoO form). This has been resolved in the latest model - the correct day will be used for the assignment and the shift shows correctly in all forms.	N/A

OPAS Release Notes

Release 10.5 – installed September 6, 2012

Release 11 – installed September 26, 2012

Solution	What Changed	Any Known Issues
Employees Missing From Group Schedule	This original issue was with newly imported employees not showing in the group schedule. The rule is that any employee who is active in the current pay period will show in the group schedule.	N/A
Allow Multiple Pending Requests for a Single Day	Users will no longer be restricted to submitting just one request per shift in OPAS - an employee will be able to put in multiple leave requests, shift change requests, shift swap requests, multiple action requests, and other duties requests all for the same shift.	N/A
Add Excused Absence Code to Edit Shift Details Dialogue	In the Edit Shift Details dialog, you'll see a new tab next to the Leave Types called Excused Absences. By dragging from this list, it's now possible to create and approve excused absence requests just like leave requests. All functionality works the same for both types.	N/A
Authorization on Note Creation	It's now possible for any user (CPC+) to create a note. An audit trail has been added for the creation / editing / deleting of a note. Updated based on call 9/18. - Supervisor+ can edit or delete any note. - Supervisor+ can show deleted notes. - The person who created the note can edit or delete.	N/A
Temporary Shift Line Creation for Devs	Nothing has changed for the solving of this issue, but a filter remains that is preventing the other Roles' shift lines to appear in the dialog. To clear out the filter, a user may right-click anywhere in the Create temporary shift line panel, navigate to Filter, and select 'Remove all column filters.'	In the Create temporary shift line dialog, each user will have to clear out the filter once in order for the filter to never appear again for that user. Please see instructions in the 'What changed' column.
Devs on Other Duties Need to be Moved Out of the Shift Panel	Two changes here: (1) Dev shift activities will now work exactly like CPC shift activities (Training : Dev :: Coverage : CPC).	N/A

OPAS Release Notes

Release 10.5 – installed September 6, 2012

Release 11 – installed September 26, 2012

Solution	What Changed	Any Known Issues
	<p>If a Dev has any coverage, they will appear with the CPCs</p> <p>If a Dev has any training, they will appear with the Devs.</p> <p>If a Dev has all other duties, they will appear in the Other Duties panel.</p> <p>(2) The other duties panel has been moved from the second tab page to the front of the DoO form (as per the mockup).</p>	
Need to Send Deletes for RDOs When an Employee is Retired	Previously, when an employee was retired we were not sending 'deletes' to CRU for their RDOs. This has been changed, and we will now send deletes to CRU for their RDOs.	N/A
Don't Send RDOs for Days Without Shift Lines in m.OPAS	m.OPAS will now only show shifts from datasets where an employee has a shift assigned. It will no longer send days as RDOs when the employee has no shift assigned.	N/A
Change "Rest Day" to "RDO"	'Rest day' has been changed to 'RDO.' This context menu item is available in two places in the current application: Schedule Generation and Group Schedule. The precondition text has also been updated. To test, set a day as an RDO, and then try to set it as an RDO again - you will see precondition text indicating that "This day is already an RDO."	N/A
Leave Request Items	The functionality related to leave requests with the new MPR functionality has been tested and added correctly.	N/A
Start and End Time Selector	The request off from / to time selectors now are properly set as the start and end time of the shift.	N/A
Editing a Shift Change Request	The ability to edit a shift change request has been removed.	N/A
Duplicate Shift Change Request	Duplicate shift change requests will be employee-specific, meaning an employee with a shift change request for a 0600 will not affect whether another employee can request a 0600 shift change request.	N/A
Shift Change Request from a 0000 Shift	Entering a shift change request for an employee who is working a true mid with 6 minutes of OT will now move the employee correctly when the request is approved.	N/A

OPAS Release Notes

Release 10.5 – installed September 6, 2012

Release 11 – installed September 26, 2012

Solution	What Changed	Any Known Issues
Approved Leave Denying a Shift Swap	When an employee involved in a shift swap has their pending full shift leave request approved, the employee will return to his or her original start time and receive the full shift off as originally intended. The second employee involved in the shift swap will return to their original start time. Attempting to move the second employee or put in a shift change request for them will correctly references their original start time, which they have already returned to.	N/A
Moving an Employee in the Day of Operations Form	Moving an employee on a temporary shift line in the Day of operation form will reassign the employee to the correct start time.	N/A
Remove Private Information in Notification Opt-In Report	The Notification Opt-in report will not show the actual phone numbers and email addresses of the opted-in employees, it will just show their names and whether or not they're opted in. Authorization has been updated on the area phone list report such that only CIC+ can open the report.	N/A
Request Shift Change Functionality Should Create New Shift Definition	When requesting a non-standard shift definition in the shift change request, approving the request will result in a new row being created in the Day of Operation form. It will no longer be linked to the "most matching" shift definition.	N/A
Approve a Denied Cancellation Request	You will now be allowed to approve a denied cancellation request. When approved, the leave will be removed from the day and a shift will be assigned (just like if you'd approved it initially).	N/A
Update Authorization on Top of Screen	The CRU icons at the top of the screen will now be available to anyone with CIC authorization or higher authorization.	N/A
Hide Invalid Leave Information	We have taken the column out of the report that displayed "invalid" requests, and disabled the constraint that caused the pop ups when you hovered on "invalid" requests.	N/A
Bidding Should Allow More Shift Lines Than Employees	It's now possible to create a bid schedule with more shift lines than employees. It is still NOT possible to create a bid schedule with fewer shift lines than employees.	N/A
